Summary

Mobile engineer with 2+ years of professional Flutter experience and end-to-end ownership of multiple production applications across fintech, healthcare, and consumer domains. Strong in offline-first systems, performance optimization, modular architecture, and maintaining large, mature codebases. Experienced in mentoring developers and delivering reliable software under real-world constraints.

Core Skills

Mobile & Architecture

Flutter, Dart, Modular Architecture, Offline-first systems, State Management (GetX, Stacked)

Backend & Data

Firebase (Auth, Firestore, Realtime DB, Storage, Messaging, Analytics, Crashlytics, Remote Config), Supabase, REST APIs, WebSockets, Hive

Web & Full-Stack

ReactJS, Next.js, TypeScript, JavaScript, Redux, MUI, Bootstrap, MongoDB Atlas, Vercel

Platform & Tooling

Android & iOS native integration, Flutter Method Channels, Google Play Console, Git/GitHub, Jira, Postman

Professional Experience

Infoane Technologies - Mobile App Developer

Jun 2023 - Oct 2025

- Delivered and maintained multiple Flutter production applications across internal tools and consumer products, ramping into live production work within days of joining.
- Built shared modular architecture with offline-first data capture, background sync, biometric authentication, QR workflows, and inventory/order management.
- Improved startup time, runtime performance, and long-term stability through targeted refactors, lazy initialization, parallel async execution, and isolate-based processing in a large, mature codebase.
- Acted as primary mobile owner for a consumer app with real-time chat, media uploads, WebSocket communication, and payment integration, coordinating with backend, QA, and junior developers.
- Built native Flutter plugins via Android/iOS method channels, led Flutter SDK upgrades (v3.7 → v3.32), and mentored junior Flutter and React developers while building a React-based admin dashboard.
- **Recognized as Q4 2024 Best Performer** for consistent delivery and ownership across production systems.

Independent Products

- **Cable Pay (Flutter)** - Offline-first business app for cable operators enabling customer management, payment tracking, and automated reminders; designed for low-connectivity field use with modular architecture and background sync; **44,000+ installs**, organically scaled from MVP to production-grade system.
- **Kalam (Flutter)** - Fully offline note-taking app with a block-based editor (text, code, lists, tables, media) supporting encrypted backups, advanced organization, and deep personalization; **4.8★ rating**, valued for speed and reliability.
- **Mudraa (Flutter)** - Offline-first expense tracker modeled around real-world entities (accounts, persons, stores) with structured transactions, instant local performance, encrypted backups, and clarity-focused financial insights; **5★ rating**.
- **Sadaiv (Flutter)** - Regional news platform built on WordPress REST API with paginated feeds, offline bookmarks, push notifications, and reading-focused UX optimized for low-connectivity environments.
- **Web Products (Next.js / React)** - Built multiple privacy-first, SEO-optimized web apps using Next.js, React, TypeScript, and MUI, including a developer portfolio platform and a client-side encrypted, shareable timer deployed via Vercel.

Overall Impact: 47,000+ lifetime installs across mobile products with zero paid marketing.

Open Source Contributions

Local Query Filter - Flutter Package

- High-performance, type-safe client-side filtering engine used in production Flutter apps, supporting compound queries, pagination, isolate-based execution, and full-text search.

Education

Master of Computer Applications (MCA) - Chandigarh University | 2023-2025

Bachelor of Computer Applications (BCA) - Institute of Management and Research | 2020-2023
